

Here is a list of some commonly used colors along with their hex values and rgb color codes:

Color	Hex Values	RGB Color Code
-------	------------	----------------

White	#FFFFFF	(255,255,255)
Red	#FF0000	(255,0,0)
Lime	#00FF00	(0,255,0)
Blue	#0000FF	(0,0,255)
Yellow	#FFFF00	(0,255,255)
Grey	#808080	(128,128,128)
Purple	#800080	(128,0,128)
Green	#008000	(0,128,0)
Silver	#C0C0C0	(192,192,192)

Visit [Color Hex](#) to get Hex and rgb color code values of any color.

Note:

1. Browser does not understand the names of the colors. The names are first converted to the hex codes and then executed by the browser.
2. RGBA: It refers to red green blue alpha. Alpha stands for transparency of the color. The color intensity will vary if we use alpha value with rgb.

E.g. background: rgba(200, 54, 54, 0.5);

The alpha value varies from 0 (zero) to 1 (one). Zero means transparent and one is used for max intensity. If nothing is used, one is by default applied.
